膀胱鏡檢查

FLEXIBLE CYSTOSCOPY

FLEXIBLE CYSTOSCOPY

Introduction

This is a procedure that involves passing an endoscope through the urethra to allow examination of the urethra and urinary bladder

Preparation

- ◆ A written consent from the patient is necessary
- ◆ No need for fasting

Procedure

- ◆ A local anaesthetic lubricant jelly is injected into the urethra
- ◆ A flexible fibre-optic cystoscope is passed via the urethra into the bladder
- ◆ Fluid is infused, through the cystoscope, to distend the bladder allowing for easier examination
- ◆ A biopsy may be required

Care & Advice

- ◆ Increase fluid consumption after the examination
- ◆ Burning sensation may be experienced when voiding, and urine may be slightly blood-stained

Possible Complications

- ◆ Urinary tract infection
- ◆ Heavy haematuria after biopsy
